Erlor+Pless

For 40 years, Erlor+Pless has been a reliable partner for traditional photo editing and processing. During this time, we have developed from a standard photo lab to a full-service provider for all your imaging needs. Our staff of 35 in the heart of downtown Hamburg works in three shifts to provide the highest standard of consultation and production for our clientele. Erlor+Pless has made a national name for itself offering consistently high quality and productivity for textile prints in photo-realistic quality, large-format laser prints and the now-classic inkjet print in formats up to XXL.

Before OPAS-G

E+P entered the digital age with an electronic photo processing system in 1989, followed by three systems working in shifts and the first large-format digital printer in 1992. Year for year, different parts of the business were reorganized or entirely new productions were created. Data management became a time factor and thus a financial factor. Archives accumulated on CD, 8 mm tapes and removable media. Excel tables were used to manage archives and documentation. Re-archiving and online customer data management needed to be streamlined and handled more professionally. Our wish list grew to include an OPI server solution, a digital job bag, an option for final costing, et cetera.

Solution with OPAS-G

After thorough testing and examination of the various solutions on the market, we decided on the OPAS-G software. Depending on the priority level, our clients either have Medias archives with online access or DLT libraries for quick access to production data from the last five years. Job data versions can be checked as quickly as the progress of entire workflows.

The last word

Thanks to the OPAS-G system, we are able to accommodate ever-increasing deadline pressures and have managed to boost output many times over with the same staff levels. We are pleased to have made the right decision years ago and are secure in the knowledge that we have at our side an innovative and reliable partner for the future.
